

Aquatic Mobile

Material:

- Sheets of different colour paper
- Aluminium paper
- Scissors
- Glue
- Nylon thread
- Wooden sticks (ex: wooden skewers)

How-To:

(Depending on the age of your child, we suggest that you help out with this project.)

- Cut small strips of aluminium paper.
- Glue the strips of aluminium paper on your coloured paper sheets and allow to dry.
- Do the same thing on the other side of the paper sheets and allow to dry.
- Fold the paper sheets in half, lengthwise.
- Draw the top part of a fish's body on the folded paper sheet (folded side on the bottom).
- With scissors, cut out the fish that you have drawn.
- Maintain the fish folded in two, lengthwise, and fold the top part of their bodies, as if you wanted to make wings.
- Unfold the wings that you have made.
- Make 3 slots starting from the side that is still folded (the bottom part of the fish) and be careful to stop cutting before reaching the folds of the wings. The slots will be used as strips at the middle of the fish.
- Unfold each fish and open them up completely.
- Pull the 2 middle strips in opposite directions: one upward and the other downward (your fish will have a 3-dimension aspect).
- Make a hole in the top strip of each fish.
- Pull a nylon thread through each hole and attach a fish to each extremity of the wooden sticks.
- Attach the wooden sticks to each other in such a way as to balance the mobile
